

TOEFL iBT Exam Vocabulary List

Welcome to Michael Buckhoff's TOEFL iBT Vocabulary List. After many years of teaching students how to prepare for the TOEFL iBT Exam, Michael noticed he was seeing the same words over and over again. He began to make a list of these words and did not find a repetition until he reached 1,700 total words. There are 1,700 words in this list divided into two categories. The first category is 200 words of intermediate level reading. The second is 1,500 words of advanced level reading.

Instructions for Mastering Vocabulary Words

When you come across a word you do not know on the "TOEFL iBT Exam Vocabulary" list, quickly write it down onto a 3 x 5 inch note card (use one word on each note card). On the back of the note card, write down the meaning of the word and any other information (i.e., pronunciation, part of speech, sample sentence, origin of word) that might help you to remember that word.

You can build your vocabulary by studying your note cards regularly. Write sentences using the new words. Add synonyms and antonyms to your note cards everyday. Little by little you will begin to increase your knowledge of informal, formal, and academic vocabulary. Now let's get started.

When reading passages for pleasure, for work, or for university coursework, you will encounter unfamiliar vocabulary. In these situations, you should try to understand the new word by looking at the context in which it is used. Examples, appositives, punctuation, the conjunction "or," clauses, referents, "be" verb, contrasts, and other words in the sentence are contextual clues which may help you to understand a new word.

EXAMPLE

Examples in the form of a word or phrase may help to explain the meaning of a word: as, case in point, for instance, for example, in fact, like, specifically, such as, and to illustrate.

This outcome is a reflection of strong sense of **solidarity** within the corporate peasant community; for instance, this solidarity is apparent in the tendency for almost every man **to remain within his village over his lifetime.**

The meaning of solidarity is identified by the example that most men remain within their village during their lifetime; therefore, you can guess that solidarity means *having an identity or coincidence of interests, purposes, or sympathies among members of a certain group.*

APPOSITIVES

In some cases, an appositive [a noun or noun phrase which is set off by commas and which modifies another noun] can help you to identify the meaning of an unknown word.

Whether psychology should be classified as a biological or social science was a contentious issue among scholars until 1960, after which time it was increasingly described as a **behavioral science; the science of the behavior of organisms.**

The meaning of “behavioral science” is identified by its appositive, “the science of the behavioral science.”

PUNCTUATION

Punctuation marks can be used to set off a word which is used to identify another word. Some useful punctuation marks that might help you to understand the meaning of an unknown word are the following:

brackets []

commas ,

dashes –

double quotation marks “ ”

parentheses ()

single quotation marks ‘ ’

If the **wire is bent into a coil, called a solenoid**, the magnetic fields of the individual loops combine to produce a strong field through the core of the coil.

The meaning of “solenoid” which is set off by commas is identified by the definition which precedes it: “wire is bent into a coil.”

THE CONJUNCTION “OR”

Sometimes “or” and a synonym immediately comes after an unknown word or phrase.

Haliaeetus leucocephalus, or the Bald Eagle, is one of two eagles in North America and the only exclusively North American eagle.

The meaning of the words “Haliaeetus leucocephalus” are identified by the words “the Bald Eagle” following the word “or.”

CLAUSES

Adjective clauses and their connectors (i.e., that, when, where, which, who, and whom) may be used to identify words.

Both the **electric generator, which makes electricity widely available**, and the **electric motor, which converts electricity to useful mechanical work**, are based on these effects.

The meaning of “electric generator” is identified by the adjective clause: “which makes electricity widely available.” Similarly, the meaning of electric motor is identified by its adjective clause: “which converts electricity to useful mechanical work.”

REFERENTS

Referents are words to refer to other words in a sentence or paragraph. The referent may refer to a previous word or one which follows it.

It is one of the more remarkable feats of American literature, how a young man who never graduated from high school, never received a college degree, living in a small town in the poorest state in the nation, all the while balancing a growing family of dependents and impending financial ruin, could during the Great Depression write **a series of novels** all set in the same small Southern county — ***As I Lay Dying***, ***Light in August***, and above all, ***Absalom, Absalom!*** — that would one day be recognized as among the greatest novels ever written by an American.

“*As I Lay Dying, Light in August*” and “*Absalom, Absalom*” can be identified by their referent “a series of novels.”

“BE” VERB

The object, which is referred to as the subject complement and which comes after the verb “be,” may be used to identify the subject.

The Great Horned Owl Bubo virginianus is one of Canada's commonest ***large birds of prey.***

The meaning of “The Great Horned Owl *Bubo virginianus*” is identified by “large birds of prey,” which comes after “is.”

CONTRASTS

Sometimes, the meaning of vocabulary words can be understood because they are in contrast to another word in the sentence. Some words to show contrast are the following:

although

but

despite

even though

however

in contrast

in spite of

instead

nevertheless

on the other hand

on the contrary

or

still

unlike

yet

Tsunamis are **unlike wind-generated waves**, which many of us may have observed on a local lake or at a coastal beach, in that they are characterized as **shallow-water waves**, with long periods and wave lengths.

Tsunamis are understood to be “shallow-water waves” because they in contrast to “wind-generated waves.”

OTHER WORDS IN THE SENTENCE

Other words in a sentence may also help you to understand the meaning of vocabulary words.

Sponges are the simplest grade of **multi-celled animals**. In general, sponges have **open-topped, sack-like bodies** which are **fixed to the sea floor**. Water is pulled through the body, and food is filtered out.

By using other words in the sentences as contextual clues, you can guess that a “sponge” is a “multi-celled animal” which is “fixed to the sea floor.”

READING STRATEGY

When encountering an unfamiliar vocabulary word, try the following:

1. Read the sentence preceding the unfamiliar vocabulary word, read the sentence, inside of which the unfamiliar word is being used, and read the sentence following the unfamiliar word.
2. Look for context clues to help you understand the meaning of the word.
3. Look for examples, appositives, punctuation, the conjunction “or,” clauses, referents, “be” verb, and contrast statements as clues to help you understand the unfamiliar word.
